

Teaching teens to “Get Net Smart for Good Health”: comparing interventions for an Internet training program

Lillian D. Trettin, PhD; Janice C. May, MPA; Nancy C. McKeehan, MSLS

APPENDIX B

Hands On Health - SC website evaluation

Website URL:		
Desired qualities of a website	Rate*	Yes/No/Comments
1. Site is sponsored by a respected, reliable, and unbiased source.		
2. Writers are qualified in a relevant field.		
3. Information is up-to-date and accurate.		
4. Site has adequate privacy protection.		
5. Site has been reviewed and approved by professionals.		
6. Contact information provides ties to a responsible person.		

* Rate using a scale of 1 to 5 (1=strongly disagree, 2=disagree, 3=neutral, 4=agree, 5=strongly agree).

General comments: _____

Hands on health website evaluation guidelines

Please keep in mind that these guidelines provide general guidance when evaluating a website for reliability and quality. No website can or should meet all these criteria.

Desired qualities of a website	Indicators
1. Site is sponsored by respected, reliable, and unbiased source.	Sponsored by government agency (.gov), university or academic institution (.edu), an established professional organization (.org or .net), or a reputable commercial organization (.com) that is not primarily intended to sell products or give slanted opinions.

2. Writers are qualified in a relevant field.	Credentials are readily apparent and are meaningful indicators. For example, a scientist can write with authority on a new and complicated biological process. A journalist writing on the same topic needs to cite a scientist with the appropriate credentials.
3. Information is up to date and accurate.	<ul style="list-style-type: none"> Clearly depicts who provides medical advice: qualified practitioners or lay people/peers. Provides a fair and balanced presentation including controversial issues and alternatives. Coverage of topics is helpful: typical questions are answered (descriptions, symptoms, therapies, etc.). Does not make claims of therapeutic benefit without reasonable support and does not provide false or misleading information. There are supporting citations/references. Dates are easy to find and indicate that the site is regularly maintained. Easy to determine currency of content: dates of creation, last review, latest revision. In the case of current research, dates should be within the last year.
4. Site has adequate privacy protection.	<ul style="list-style-type: none"> Warns against using online medical advice to replace personal health visits. States clearly whether personal information is collected, maintained, and used by site Users can choose to opt in for personal health information/tracking prior to data collection. Has privacy policies to safeguard personal or financial data, if appropriate.
5. Site has been reviewed and approved by professionals.	<ul style="list-style-type: none"> Editorial policy is stated or names and credentials of reviewers are listed and easy to find. Seals of approval are reputable and relevant (an award for website design does not ensure that health information is valid).
6. Contact information provides ties to a responsible person.	<ul style="list-style-type: none"> Name, credentials, affiliation, email address, and phone number given for a contact person. Information is easy to find on the home page or at a recognizable link ("about us" or "welcome" are examples).

Additional pointers:

Site is easily navigated.	<ul style="list-style-type: none"> Loads quickly and leads directly to relevant links. Users do not have to hit several links to answer question. Easy to move through without getting lost. Has a table of contents (site map). Has an internal Search feature.
Information is suitable for intended audience.	<ul style="list-style-type: none"> Clearly written and easy to understand. Medical terms defined or explained. Simple vocabulary, short sentences, bullets.

	<ul style="list-style-type: none"> ▪ Sites for ethnic/cultural/disabled groups address topics using appropriate terminology.
Site is accessible.	<ul style="list-style-type: none"> ▪ Most information is free. ▪ Fee based services are obvious. ▪ Site accommodates the disabled: <ul style="list-style-type: none"> – Vision impaired – Deaf – Motor impaired – Other

The following clearinghouses or index sites may be helpful in your evaluation of the site being reviewed:
